

1 I claim:

2 1. A male urinary system comprising:

3 penis/urinary collection interface unit, said  
4 penis/urinary collection interface unit comprising  
5 a primary receiver unit for accommodating at least  
6 a portion of the length of a male penis during  
7 urination, and a secondary containment unit in which  
8 said primary receiver unit is at least partially  
9 nested with proximal margins of said secondary  
10 containment unit and said primary receiver unit  
11 being fused to prevent fluid ingress or egress past  
12 the line of juxtaposition, said primary receiver  
13 unit being positioned relative to said secondary  
14 containment unit whereby a gap is formed between the  
15 outer surface of said primary receiver unit and the  
16 inner surface of said secondary containment unit,  
17 said gap extending at least from the distal end of  
18 said primary receiver unit and the said line of  
19 juxtaposition between said secondary containment  
20 unit and said primary receiver unit, said primary  
21 receiver unit opening at its distal end into said  
22 secondary containment unit near the distal end of  
23 said secondary containment unit;

1 conduit means attached to said distal end of said  
2 secondary containment unit for collecting urine  
3 flowing from said distal end of said primary  
4 receiving unit;

5 urine receptacle means for receiving urine which flows  
6 through and from said conduit.  
7  
8
